DETAILED ACTION

Allowable Subject Matter

1. Claims 11-17 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 18 rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong et al. (2002/0063292) in view of Yasukawa (JP 01076755) further in view of Forbes et al. (6,483,171).

Regarding Claim 18, Armstrong et al. disclose a CMOS fabrication process utilizing special transistor orientation where in Fig. 3, a substrate 201 with a notch and a current flow in <100> direction and a PFET and NFET 203a and 203b. Armstrong et al. fail to disclose the required PFET current flow in the <110> direction, gate dielectric and sidewall/spacers. However, Yasukawa discloses a semiconductor device with PFET having a current flow in <110> direction. Furthermore, Forbes et al. disclose vertical sub-micron CMOS transistors on (110), (111), (311), (511) and higher order surfaces of bulk SOI and thin film structure and method of forming same where in Figs 4A-4C the required gate dielectric and the sidewall/spacer structures are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required PFET current flow direction, gate

dielectric and sidewall/spacer in Armstrong et al. as taught by Yasukawa and Forbes et al. respectively in order to have a semiconductor device with increased performance.
